SUMMARY

Frontend engineer with 4+ years of building for the web (3.5+ commercial). I ship React and TypeScript products solo and end to end: Telegram Mini Apps with crypto payments, Next.js e-commerce, Smart TV apps and real-time 3D product configurators, including the data layer and deployment around them. Looking for a product team where I can own complex, performance-sensitive frontend.

SELECTED PROJECTS — LIVE DEMOS

- [Boat Configurator](#) — Three.js inside a React + TypeScript + Redux app, shipped to production
- [TV Course Browser](#) — React app for Samsung Tizen, driven entirely by a TV remote
- [Windows & Doors Configurator](#) — 7 product families on one config-driven architecture

SKILLS

Frontend: React, TypeScript, JavaScript, Next.js (SSR), Redux Toolkit, RTK Query, TanStack Query / Table, Zustand, React Router, framer-motion, HTML5, CSS3 / SCSS, Tailwind

Platforms: Telegram Mini Apps (WebApp API, TonConnect), Web3 wallet flows, i18n (i18next, next-intl), Smart TV (Samsung Tizen, LG webOS), Strapi, Shopify / Wix / Webflow embedding

3D & graphics: Three.js, WebGL, WebXR / AR, glTF + Draco, Phaser 3, Canvas 2D, Fabric.js, Konva, GSAP

Performance: Code splitting, lazy loading, list virtualization, request caching, asset compression, Lighthouse

Delivery: Git, Vite, webpack, esbuild, ESLint / Prettier, node:test, GitHub Actions, Linux, nginx, DNS / CDN, DigitalOcean, Figma

Also: Google Sheets API + Apps Script, Python / Django templates, WordPress plugins; AI-assisted development (Claude Code, Codex, Cursor)

Languages: Ukrainian (native), English (B2), Polish (basic)

EXPERIENCE

Frontend / 3D Web Developer | Marevo, Remote, B2B

Feb 2026 – Present

Real-time 3D product configurators for furniture, windows and doors, pergolas, bathrooms and prefab houses. Sole developer per project.

- Built 5 client-pitch 3D configurator prototypes in about a week each; 2 were signed as production projects. Delivered the first through client handoff and now lead the second end to end.
- Extended a 3–4-year-old production pergola configurator sold through a live storefront: embedded it into Shopify, Wix and Webflow via cross-origin postMessage, and added PDF quote generation, shareable URL-encoded configurations and cannon-es physics.
- Fixed a production failure where every option change re-downloaded the full XML price catalogue and hit CORS errors; added request caching and reworked the fetch flow so configuration changes apply instantly.
- Cut 3D payloads by up to 79% (32.8 → 6.75 MB) with Draco geometry and WebP textures, taking mobile first load from ~40 s to 10–15 s; the workflow is now applied to all new and legacy models.
- Replaced three separate window, door and back-door configurators with one config-driven Three.js architecture covering 7 product families, guarded by contract tests for state round-trips, value clamping and product codes.
- Shipped “view in your room” AR on 5 configurators (WebXR / model-viewer, iOS Quick Look, QR hand-off from desktop to phone), including placing a prefab house at real-world scale.
- Own the layers around the frontend: client-editable data backends on Google Sheets + Apps Script (prices, options) and deployments on DigitalOcean droplets and Spaces CDN with DNS, nginx and rsync.

Frontend Developer | Avada Media, Remote

Mar 2024 – Feb 2026

Sole frontend developer on each project: Web3 Telegram Mini Apps, e-commerce, Smart TV and 3D.

- Built nearly the entire frontend (829 of 830 commits) of a TRON energy-rental Telegram Mini App that lowers users’ transaction fees: multi-wallet and multi-account management, orders, top-ups, QR payments and 6 languages. The app is still live.
- Rebuilt wallet, transaction-history and shop lists from load-everything to paginated lazy loading with a hand-written request cache, keeping the UI responsive for users with 200+ wallets.
- Built the operator admin panel for the same service in React 19, TypeScript, TanStack Query and TanStack Table: clients, rent orders, top-ups, referrals and mailings.

- Built a tap-to-earn Telegram game with TonConnect wallet connection and persistence, automated on-chain transactions and timed farming events, plus a Phaser 3 bonus mini-game with a leaderboard and reward codes.
- Developed 2 Next.js e-commerce storefronts on Strapi: catalogue with filters, product pages, cart, checkout, favourites, Nova Poshta delivery and next-intl localisation, with RTK Query for data.
- Reworked the cart of a production 3D boat configurator (React, TypeScript, Redux Toolkit, Three.js): stopped rebuilding the whole cart on every add and switched to incremental updates, removing the lag and a cluster of related bugs and unblocking the V2 launch.
- Optimised a Smart TV fitness app for Samsung Tizen and LG webOS (React, Zustand, remote-control spatial navigation), raising the Lighthouse score from 62 to 95 and removing major UI latency.
- Took part in data-structure planning for a Django monolith and shipped features directly in its Python templates.
- Mentored a group of 6–7 students on the company's React course for about a year through code reviews and project work; helped students land their first developer jobs.

Trainee Frontend Developer | Avada Media / SpaceLab, Remote

Feb 2023 – Feb 2024

- Built pages and features in production Next.js / Strapi projects to the team's stack and guidelines; took part in estimates, code reviews and sprint work.

EDUCATION

B.Sc. Computer Engineering — Lviv Polytechnic National University

2020 – 2024

Thesis: training a neural network for optical character recognition (Python).

Additional training: React Developer program, SpaceLab (2022 – 2023), which led to the trainee position; 2D and 3D Web Graphics courses, SpaceLab.
