

TYSHKOVETS PAVLO

Frontend Engineer | Three.js / WebGL | React & TypeScript

+380970785760 tishkovets.pavlo@gmail.com LinkedIn Telegram GitHub

SUMMARY

I build 3D configurators and Web3 products that progress from client demos to signed production projects. Over the past five years, including 3.5 in commercial roles, I have delivered features across 10+ configurator repositories, built and reworked wallet and transaction systems handling real user funds, and improved complex React, Three.js, and WebGL applications through architecture, performance, and data-flow optimization.

SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, Redux Toolkit, React Query / TanStack Query, HTML5, CSS3, SCSS, Tailwind, BEM

3D / Graphics: Three.js, WebGL, Canvas, ModelViewer, Pixi.js, Phaser.js, Konva.js, Fabric.js, GSAP, 3D configurators, scene setup, lighting, camera configuration, animation systems, materials and textures, model optimization, real-time rendering

Performance: Lighthouse / PageSpeed optimization, lazy loading, code splitting, virtualization, caching, asset and model optimization, render optimization, load-time optimization

Architecture: Legacy system modernization, state and data-flow redesign, API integration, modular architecture, OOP, design patterns, algorithms, data structures

Tools: Git, ESLint, Prettier, Stylelint, Figma, pixel-perfect implementation, responsive design

AI-assisted development: Claude Code, Codex, Cursor - agentic coding workflows, implementation, debugging, refactoring, and code review, plus AI-assisted DevOps and deployment

Languages: English B2, Ukrainian native

PROFESSIONAL EXPERIENCE

Frontend / 3D Web Developer

February 2026 - Present

Marevo, Remote

- Built 5 client-facing 3D configurator demos independently, typically in about a week each; 2 were approved and signed as full production projects. Delivered and handed off the first project to the client, and advanced the second — a window-and-door configurator - from phase 2 to phase 3 with the core logic complete, now entering the main UI build and feature-expandability phase.
- Worked across 8 legacy 3D configurator projects, including a 3–4-year-old pergola codebase and a multi-repository house platform; delivered a full house configurator repository in ~2 weeks, followed by stabilization and bug fixing.
- Refactored the pergola configurator's data-fetching layer to resolve a critical failure in core functionality: loading product data from Excel/Shopify reloaded the entire XML dataset on every user action, causing CORS blocks and constant redundant network requests. Introduced caching and reworked the request flow, eliminating repeated fetches and CORS errors and making configuration interactions load reliably and near-instantly.
- Introduced a model-compression workflow adopted across new and existing assets, reducing typical model size from 20–30 MB to 8–10 MB and mobile load time from ~40 seconds to 10–15 seconds.
- Integrated AI tooling (Claude Code, Codex, Cursor) deeply into daily development - implementation, debugging, refactoring, and review - raising personal output by 50–70%, enabling parallel delivery across multiple projects and letting me cover adjacent work including DevOps, deployment, and design.

Front End Developer

March 2024 - February 2026

Avada Media, Remote

- Refactored and scaled a 3D boat accessory constructor by redesigning the cart system, Redux flow, and API handling, improving cart operations by 30-40% and enabling V2 launch.
- Delivered 2 production Web3 applications from V1 to V2, including redesigns and web versions.
- Built tap-to-earn game functionality including wallet connection, wallet persistence, automated on-chain transactions, timed farming events, high-frequency state updates, and transaction syncing.
- Developed a crypto fee-saving app with multi-wallet and multi-account management, validation, real-time syncing, and editing.
- Rebuilt global list handling for wallets, transaction history, and shop flows to support 200+ wallets using pagination, caching, virtualization, and lazy loading, reducing render workload by approximately 80-90%.
- Optimized a Smart TV fitness app for Samsung and LG environments, improving Lighthouse Mobile score from 62 to 95 and eliminating major UI latency.
- Mentored 6-7 React students through code reviews, production practices, and frontend architecture guidance.

Trainee Frontend Developer

February 2023 - February 2024

Avada Media / SpaceLab, Remote

- Contributed to responsive applications built with the MVC pattern, Next.js, and Strapi, delivering cross-device consistency and feature-rich functionality.
- Integrated third-party APIs, improved user flows, optimized assets and code, and performed testing, debugging, and refactoring for stable releases.

EDUCATION

Bachelor of Computer Engineering, National University Lviv Polytechnic, Lviv

May 2020 - May 2024

Completed a Bachelor's diploma thesis on neural network implementation, training, and practical use.

ADDITIONAL TRAINING

3D Web-Graphics courses, SpaceLab, Remote

August 2025 - January 2026

2D Web-Graphics course, SpaceLab, Remote

March 2025 - August 2025

React Developer, SpaceLab, Remote

January 2022 - February 2023

Earned Trainee position at Avada Media.
